AZALEAS

KURUME AZALEAS

The Kurume Azaleas are one of the most showy of all flowers for the garden. They are also well adapted to forcing—thousands of them being sold for Easter, Mother's Day and Decoration Day. They are comparatively easy to grow and make such a wonderful display that the demand is constantly increasing. Many of the varieties are hardy out-of-doors as far north as Long Island. They are extremely floriferous, and in season the blossoms completely cover the plants. The colors are almost every hue and shade except yellow, as you will find below.

ARNOLDIANA AZALEAS

In 1914, the late Jackson Dawson, then superintendent of the Arnold Arboretum, at Boston, Mass., created a splendid new type of hardy Azalea by crossing Azalea Kaempferi and Azalea Amoena. Of the seedlings thus produced a considerable number of them were grown at Boston from their infancy until flowering age, when the following ones of unusual beauty and vigor of growth were selected.

These Arnoldiana Azaleas have done exceptionally well in Indianapolis, Indiana, and we can recommend them for trial in similar soils and conditions.

The new book, "Azaleas—Kinds and Culture" by Hume, costs \$4.00, but just one or two Azalea plants will pay for it. We have found it worth many times this price to us.

GABLE'S HARDIER AZALEAS

As many of you know, we have been growing and recommending these Gable Hardier Azaleas for several years, and the more they are known the bigger the demand for them.

Mr. Gable has constantly had in mind a hardier type of Azalea with a much wider color-range than has heretofore been possible to secure. He has had wonderful success in his efforts. We have been keeping in touch and working closely with him and are much pleased that we can offer the following varieties.

You will notice many new varieties are being offered this season for the first time, some not yet named. As soon as they are named you will be advised of it. We have other varieties of these Gable azaleas which will be offered as soon as we have sufficient stock propagated.

ALUMINUM SULPHATE

Azaleas, Rhododendrons, Blueberries, Cornus florida, Heather, Kalmia and many other plants require an acid soil. Acid-forming organic matter, such as well-rotted oak leaves helps to increase acidity. Aluminum Sulphate is a good chemical for increasing soil acidity by using $\frac{1}{4}$ to $\frac{1}{2}$ pound per square yard. Also used for turning hydrangeas blue.

"AZALEAS AND CAMELLIAS" by H. H. HUME

Interest in Azaleas and Rhododendrons is greatly increasing. Until now, little information on varieties, care and culture of these plants has been available. Mr. Hume accurately and thoroughly describes the varieties best suited for various uses and discusses questions on culture, such as soils, fertilization, planting, propagating, and general care, indoors and out. He has taken special care to describe accurately the several groups of Azaleas and Camellias, and his suggestions on the use and culture are very practical. If you are growing Azaleas and Rhododendrons you will find this book much help. While the book is entitled "Azaleas and Camellias" it applies equally to Rhododendron culture. Price \$2.00 each, postpaid.

KAEMPFERI HYBRID AZALEAS

In these new Kaempferi Hybrids—the result of crossing Kaempferi and Malvatica—there has been obtained the hardiest type of evergreen Azalea, with a good range of form and color in the flowers so far achieved. Several years' tests have demonstrated that these new Hybrids are just as hardy as Kaempferi, until now the hardiest of the evergreen sorts. In connection with these Hybrids we suggest you try out the new Gable varieties we are offering.

AZALEAS—Kinds and Culture

By H. Harold Hume

This new book, written by an outstanding authority presents a wealth of up-to-date information on Azaleas. All details in the successful growing of Azaleas are carefully explained. Describes typical soils; how to grow them to the most favorable condition; best method of planting and growing on; how to feed, mulch and water them; control pests and insects and various methods of propagating them. Beautiful full color and black and white plates. Worth many times its cost of \$4.00 postpaid.

AZALEA ROOTED CUTTINGS

We can furnish nice strong rooted cuttings of most of the Azalea varieties listed herein. Send a list of the varieties wanted for prices.

AZALEA POTTED PLANTS

We have potted plants of most of the Azaleas listed herein. If the variety you want is not listed in pot plants ask us for price.

PAINTED WOOD TREE LABELS WIRED

Painted, wired Wood Tree Labels $3\frac{1}{2}$ inches long, which we will furnish as long as they last at \$3.85 per 1000.

This nursery was started just 43 years ago by the present owner. We have made many mistakes but we believe our customers will agree that we have always tried to give a dollar in value for every dollar received. This will be our aim as long as The Tingle Nursery Co. stay in business. If you have any reason for complaint, tell us.

AUNT MARY'S SWEET CORN

THE SWEET CORN SUPREME

This is the most wonderful Sweet Corn we have ever grown. One grower describes it as "the best Sweet Corn in the world."

Has the most delicious flavor and keeps a long time before becoming too hard to use. In fact, usually requires artificial heat to cure it for seed purposes.

Aunt Mary's Corn, by its excellent quality, sweetness, and flavor makes a stronger appeal to the Corn-loving public than most any other variety and that appeal continues long after you are tired of other Sweet Corns.

Liberal size packets, 35c each; 3 for \$1.00, postpaid.

If after growing this wonderful Sweet Corn you are not entirely satisfied, we will refund every cent you paid us for it.

The Sasanqua Camellias we are offering on pages 20 and 42 are really wonderful in sections where Kurume Azaleas will grow. Your customers are going to want them. Better start growing them right away.

MISCELLANEOUS AZALEAS

In the following list of Azaleas you will find many species; they are not classified or separated as to their different species. We are trying to give such descriptions that you may know, or have a general idea what each variety is like.

2-yr. seedling Azaleas are not as large as our 2-year Azaleas grown from cuttings. S. following size signifies seedling.

Azaleas have been one of our specialties for many years. This season we are pleased to offer the largest stock we have ever grown, and at reduced prices, too. If you have not been getting your Azaleas—Lining-Out or Specimen—from us, we wish you would try ours this season. We aim to please you with Azaleas as well as with our other stock.

BLUEBERRIES

During the past few years Blueberries have been very much in demand even at the high prices asked for them. Prices are much lower now and you should get in on this new business. Offer them to your trade and see the extra sales you will make. You can order the varieties you want or we will select the varieties for you. Will ship to you or direct to your customers. See page 41 for varieties, sizes and prices.

GLENN DALE HYBRID AZALEAS

The Division of Plant Exploration and Introduction at the Glenn Dale Plant Station began introducing, in 1941, a group of selected seedlings from their own crosses. We have been growing and propagating these plants since then and we are now offering them to the trade.

A. The purpose of this breeding work was to obtain a class of winter-hardy Azaleas that would have as large and varied flowers as those of the "Indian Azaleas" which are not hardy in this section. Mr. B. Y. Morrison, who has been leading in this work, has done a wonderful job, not only in producing large size and varied colors but has also bred the hardiness into the plants. These plants are most interesting. The flowers run to over 4-inches across and include both self-colored and variegated. The plants are mostly excellent growers and do well here, and from all appearances will grow well in much colder sections.

B. When I was told they had some blooms that would run over 5-inches across I could hardly believe it but, it is so. I have seen them, and hope to offer some of the plants in another season or two. We only have a small quantity of some varieties, but hope to get all varieties distributed in as large an area as possible so we may have information as to how they grow generally throughout the country. If you get some of these we will appreciate knowing how they grow with you. We suggest you give these a trial.

BUXUS KOREANA, A.A. TYPE. This is probably the hardiest of all the Boxwoods. This strain is entirely different from the above. Propagated from plants sent to us by the Arnold Arboretum many years ago. Foliage a good green both summer and winter; narrower leaves than <i>Semperfirrens</i> ; slow, spreading grower. We have been selling all our stock to growers who saw it in our nursery.

BUXUS MICROPHYLLA var. COMPACTA. New, rare, extremely dwarf and hardy Boxwood. Has stood all weather conditions in the Pocono Mountains where temperature drops below zero. Very dwarf and slow growing. Ideal for edging, rockeries, Knott gardens and all uses where plants are required to remain dwarf. Original plant after twenty-eight years, is now about 12 inches high and 21 inches wide. A rare gem. Stock very limited.

BRILLIANTY. One of the most beautiful of Sasanquas. Large, single, bright rose-pink. Foliage dark green. Very compact, fairly fast grower.

MAIDEN BLUSH. Single flower of delicate pink.

MINE-NO-YUKI (Snow on the Mountain). The large, double, white flowers resemble a carnation and are borne in such profusion as to literally cover the entire plant.

RUBRA SIMPLEX. A very good red flowering variety.

WHITE BUTTERFLY. Single, white with pink margin.

Very vigorous grower.

In addition to above varieties we have many more in smaller quantities. See page 42.

As Good As Can Be Grown

We are exerting effort to produce the very best stock that can be grown, and in our forty-two years' experience we believe we have never offered bigger values than we are offering this season. Even with the short supply of Lining-Out stock we have kept our prices at a low level. We feel sure you will be more than pleased with the stock we send you if you give us your order.

We try to secure our propagating wood from only the very best type of plants, and by doing this we can furnish you stock that should be of the best that it is possible for you to get anywhere, regardless of price.

HARDINESS OF PLANTS. When hardiness of plants is mentioned herein it applies only to this section unless otherwise mentioned.

Our stock this season is as good or better than our average and we believe our average is as good as any grower's. Come and see it or if you cannot come send your order and leave it to us to please you.

A New Way To Get Scarce Plants

You have often wanted to propagate some plants of a scarce or high priced variety but did not have the proper facilities to do it with. With a new outfit we are offering, you can do it yourself, as easily as making an old-fashioned graft. You take a branch of the shrub or tree you wish to graft, (leaving it on the parent plant) girdle the branch or twig, put damp peat moss or damp sphagnum moss around the girdled part and wrap it tightly with this new water-proof plastic (in sheets) and tie it, top and bottom, with rubber bands. Generally within six to eight weeks the twig is rooted ready to pot. It requires no watering or other attention until ready to pot. Complete outfit (enough plastic sheets and rubber bands to make 100 grafts) with complete instructions how to do the grafting, for \$5.00 postpaid.

MANUAL OF CULTIVATED TREES AND SHRUBS.

Alfred Rehder. \$12.00.

This standard reference will be welcomed by all who are interested in the cultivated trees and shrubs hardy in North America. It presents a systematic and descriptive enumeration of 2,550 species and their many varieties. Identification is facilitated by analytical keys. An exact description of each tree is given together with brief notes on its economic and ornamental properties. A glossary, complete index of authors' names and a map showing zones of hardiness are also included. Map; 996 pages; 5 $\frac{1}{2}$ x 8 $\frac{3}{4}$ inches.

HOLLY (*Ilex*)

We consider the Holly one of the very best ornamental trees or shrubs. Nothing is prettier than one of our American Hollies with great clusters of bright red berries and dark green leaves shining above the snow in winter. The nurseryman who will grow a collection of Hollies to a specimen size will have something he can sell, whether times are good or whether they are bad. There is always a demand for them, and there will be as long as any other plants will sell. We know you who took our advice five years ago to plant Holly will confirm this.

We have many more varieties in small lots than are listed here.

	Each	10	100	1000
--	------	----	-----	------

Aquifolium (English Holly). This is not as hardy as the American Holly (*Ilex opaca*) but can safely be planted from New Jersey southward. The foliage is a bright glistening green and the berries are larger than the American. A very beautiful Holly.

3 in. pots.....	4.00	35.00

Cornuta burfordi. Another form of *Cornuta*, but spikes on the leaves are not so prominent and it is more hardy than the type. Berry-bearing.

3 in. pots-plants.....	\$4.00	\$35.00
------------------------	--------	---------

Cornuta femina (Chinese Holly). A berry-bearing form of *Cornuta*. Compact pyramidal grower. Leaves dark glossy green, oblong, with 3 strong spikes at the dilated apex, and 1 or 2 on each side; scarlet berries. One of the showiest Hollies.

3 in. pot plants.....	\$4.00	\$35.00	\$300.00
-----------------------	--------	---------	----------

Crenata (Japanese Holly). A much branched evergreen shrub rarely to 20 feet tall; leaves crowded $\frac{1}{2}$ to $1\frac{1}{4}$ inches long, lustrous green. Flowers in May and June; black fruits ripen in October and remain during Winter. Hardy in New York southward.

For over 25 years we have been growing Azaleas extensively. We are now producing over half a million plants (mostly lining-out sizes) a year. We began with Amoena, Hinodegiri and a few other Kurume varieties. Then Mr. Gable came along with his hardier types, and later Mr. Morrison with Glenn Dale hybrids. We have seen some of the later productions of these breeders and we wonder just how much better and showier will be the varieties that will follow in the next few years. We now have and hope to offer you in the next two years some that I know will surprise you. Several of the new ones are being offered this season but you can look forward to some even better, just as soon as a sufficient stock can be propagated. We suggest that you try these new ones just as soon as they are offered, for newspaper and magazine articles are helping create a demand for them already. Grow the older varieties for your established trade and these newer varieties to create more interest in Azaleas.

Show you how the new Glenn Dale Azaleas look. You will not think they can be equaled. For hardiness they are best. Something new in Azaleas.

AZALEAS—Kinds and Culture

By H. Harold Hume

A comprehensive new guide to this important family of flowering shrubs, written by the author of *Camellias in America*. Covers both deciduous and persistent-leaved Azaleas, their botany, history, and adaptability, as well as propagating methods, planting operations, culture outdoors and in greenhouses, and landscape use.

This is a volume that should be in the possession of all lovers of fine gardens, and especially those concerned with Azalea culture.

Price, \$4.00 postpaid

ALUMINUM SULPHATE

Azaleas, Rhododendrons, Blueberries, Cornus Florida, Heather, Kalmia and many other plants require an acid soil. Acid-forming organic matter, such as well rotted oak leaves helps to increase acidity. Aluminum Sulphate is a good chemical for increasing soil acidity by using $\frac{1}{4}$ to $\frac{1}{2}$ pound per square yard. Also used for turning hydrangeas blue. 10 lbs. \$1.50; 50 lbs. \$4.50; 100 lbs. \$7.50.

3 in. pot plants..... \$4.00 \$35.00

Opaca (American Holly). An evergreen tree to 40 feet tall, with spreading branches forming a narrow pyramidal to globe-shaped head; leaves 2 to 4 inches long, with narrow spiny teeth, dull green above, yellowish green beneath; fruit red, globose, about $\frac{1}{4}$ inch across. Flowers in May and June; fruits late in autumn through winter. Hardy in Massachusetts southward. Much used for Christmas decoration.

* 1 yr. S..... \$6.00

The following are selections of good heavy berry-bearing types of American Holly that we are carrying under number only. Any of these numbered varieties are \$4.00 for 10, \$35.00 per 100 of a variety, 3 in. pot-size.

No. 1. Tall, compact. Very good.

No. 2. Dwarf grower as broad as high.

No. 3. Attractive leaf pattern. Heavy bearer.

No. 5. Tall compact. Good bearer.

No. 6. Semi-pyramidal. Informal.

Opaca, Arden (Arden Holly). An American Holly originating north of Wilmington, Del. and selected for its good growing habit, handsome and wonderful fruiting qualities.

3 in. pot plants..... \$4.00 \$35.00

Opaca, Croonenburg. The Wonderful New Holly. In a mature plant the leaves are $2\frac{1}{2}$ to $3\frac{1}{4}$ inches long and 2 to $2\frac{1}{2}$ inches wide, having about 7 to 9 spines of a very dark green, not having the usual yellowish tint found in the most familiar American Hollies. It bears berries from cuttings almost continuously.

3 in. pot plants..... \$7.00 \$65.00 \$625.00

Opaca, East Palatka. A cross of Dahoon and Opaca. Its evergreen leaves are practically spineless. The deep red berries are borne in heavy clusters, ripen a month or so before Opaca and persist on the tree until spring.

3 in. pot plants..... \$4.00 \$35.00

Opaca femina. A berry-bearing form of the American Holly. Cuttings selected from good berry-bearing trees.

3 in. pot plants..... \$4.00 \$35.00 \$300.00

Opaca, Howard. A named berry-bearing form of American Holly. Small glossy leaves, with an abundance of dark red berries in clusters.

ROLL LATH SHADE

Before the war we had a good trade with Lath Shade for covering small lining out stock, seedlings, etc., but during war could not get help and material to make it but we are again offering it. Made of spruce laths, painted red, 4 feet long, $1\frac{1}{2}$ inches wide and spaced about width of lath apart, woven together with 5 double strands of galvanized wire, see illustration, thus giving half shade. Made in 50 and 100 feet length, easily rolled up and stored. 18 cents per running foot, over 500 feet at 17 cents per running foot.

EMBOSSSED ZINC LABELS

We will make from your list of varieties, Embossed Zinc Labels, $\frac{1}{2}$ inch wide at 7c each in any quantity desired. These Labels will permanently identify your plants.

AS A MATTER OF RECORD

Forty-three years is a long time in a person's life. That is just so long as the writer has owned and operated The Tingle Nursery Company. In this time I have tried to keep abreast of the times in offering you the better and newer plants as they were introduced. During the wars we were slowed down but tried to keep up the quality of our stock. We had to discontinue producing many varieties due to insufficient help. A good bit of the credit for our growth goes to our help; without them we could not have carried on—and without you, our customers, we could not have carried on. I now thank you both and all.

LILACS (*Syringa*)

Our 1-yr. lilacs are the strongest we have ever grown and are sure to please you.

ALUMINUM SULPHATE

Azaleas, Rhododendrons, Blueberries, *Cornus florida*, Heather, *Kalmia* and many other plants require an acid soil. Acid-forming organic matter, such as well-rotted oak leaves helps to increase acidity. Aluminum Sulphate is a good chemical for increasing soil acidity by using $\frac{1}{4}$ to $\frac{1}{2}$ pound per square yard. Also used for turning hydrangeas blue. 10 lbs. \$1.50; 50 lbs. \$4.50; 100 lbs. \$7.50

I know of no better investment than that of some good books. You get a lot of what other people know for only a few dollars.

TAXUS (Yew)

It is only in the past few years that nurserymen in the United States have begun to really appreciate and grow the Yew. In England there are Yews more than a hundred years old, but unfortunately the English Yew (*Taxus baccata*) is not reliably hardy in the north, and many do not realize that the Japanese, and many forms of Media, are perfectly hardy in and around Boston, and the Japanese even in northern New England.

They are not so particular as to character of soil except that it should not be too wet, but they do appreciate plenty of good plant food. They are immune to many insect pests and plant diseases so destructive to many other evergreens.

The Yew in its many species and forms can well be used in most all places where any other evergreen will do well.

We honestly believe you will do well to plant and grow on some of these Yews.

ROLL LATH SHADE

Before the war we had a good trade with Lath Shade for covering small lining out stock, seedlings, etc., but during war could not get help and material to make it but we are again offering it. Made of spruce laths, painted red, 4 feet long, 1½ inches wide and spaced about width of lath apart, woven together with 5 double strands of galvanized wire, see illustration, thus giving half shade. Made in 50 and 100 feet length, easily rolled up and stored. 18 cents per running foot, over 500 feet at 17 cents per running foot.

LARVA-TOX

90-10 (Ethylene Dibromide-Ethylene Dichloride)

A new material that meets government Japanese Beetle Quarantine requirements for treating bare rooted woody stock by the dip method, between October and May 15. More economical than washing.

This may also be used as a soil fumigant mixed with water at the rate of 1 gallon to 350 gallons of water, and this solution applied at the rate of 1 gallon per sq. yd. The water solution may be applied on growing plants to control nematodes and other insects.

Quart bottle (makes 85 gal.)	\$ 2.00
1 gallon (makes 380 gal.)	6.75
5 gallons (makes 1897.5 gal.)	33.00

LARVA TOX FORMULA No. 2 (Ethylene dichloride)

Primarily used in treating potted and balled plants (between October 1 and May 15) to obtain certification for shipment out of Japanese Beetle area. May also be used to control peach borer. 1 gallon will make 201 gallons of solution.

LARVATOX WITH CHLORDANE

A new material recently authorized by the U.S.D.A. that kills the Japanese beetle eggs as well as the grubs. Potted and B and B plants dipped in a solution of this material may be shipped the entire year providing soil and air temperatures are maintained at a minimum of 60%. Will have value as a soil fumigant but it is too new to offer any specific recommendations. Use 3 CC's to make 1 gallon of dip.

The Rare Franklinia

(Franklinia Alatamaha; Gordonia Alatamaha)

One of Our Best Sellers

Franklinia have proved hardy in Toledo, Ohio for past four years.

Our sales of Franklinia have increased more in the past three years than that of any plant we sell. It is one plant most every one wants once they see it and they tell their friends about it, too.

This exquisite fall-flowering tree was brought in 1777 from the banks of the Alatamaha River in Georgia to Bartram's garden at Philadelphia. John Bartram, recognizing its extraordinary beauty and value, named it in honor of his life-long friend, Benjamin Franklin.

The original grove of Franklinia trees was again visited in 1790, but from that day to this no one has seen these trees growing in the wild, though many expeditions have searched the banks of the Alatamaha for them.

Franklin's tree is beautiful in detail and marvelous in landscape effect, besides blooming at a season when few shrubs or trees are in flower.

The slender trunk and graceful branches are so muscular and sinewy in appearance that one almost expects motion as under a greyhound's skin. The bark is smooth and dark gray, with wavering lengthwise markings of lighter color.

Each twig develops at its tip a cluster of buds of graduated size, like overgrown greenish pearls. Early in August the largest of these attain the size of marbles. Then the guard petal folds back, still retaining its firm spherical form. From this shelter emerge four other petals, satiny, snowy white, elaborately frilled and pleated. The snowy, frilly chalice, three inches in diameter, holds a sumptuous mass of orange-gold stamens and breathes forth a delicate, balmy fragrance.

Each flower lasts two or three days and then drops cleanly. There is a constant succession of bloom till hard frost. We frequently get the unusual effect of a tree clad in crimson, autumn foliage and abundantly starred with white flowers.

The Franklinia begins blooming when not more than 3 or 4 feet high. Young trees under favorable conditions increase in height a foot or more each season. Specimens 30 feet high are known. It develops naturally with several trunks, but may easily be trained to a single trunk by removing the sprouts which start from the base.

Franklinia prefers full sun, has proved entirely hardy about New York and hardy in favorable locations about Boston. It is an especially desirable tree for the small, intimate garden, loved and lived in. It is a charming lawn tree and the grass may be allowed to grow closely about the trunk. It also thrives when planted by pools, lakes and streams. Its light elegance of form and color contrasts exquisitely with the dark green of conifers.

AUNT MARY'S SWEET CORN

THE SWEET CORN SUPREME

This is the most wonderful Sweet Corn we have ever grown. One grower describes it as "the best Sweet Corn in the world."

Has the most delicious flavor and keeps a long time before becoming too hard to use. In fact, usually requires artificial heat to cure it for seed purposes.

Aunt Mary's Corn, by its excellent quality, sweetness, and flavor makes a stronger appeal to the Corn-loving public than most any other variety and that appeal continues long after you are tired of other Sweet Corns.

Liberal size packets, 35c each; 3 for \$1.00, postpaid.

If after growing this wonderful Sweet Corn you are not entirely satisfied, we will refund every cent you paid us for it.

You Should Sell BLUEBERRIES

Easy To Handle. Good Profits

Cultivated Blueberries are hardy shrubs of rare beauty; they are doubly valuable because they are fruitful and ornamental throughout the entire year.

Just loads of delicious berries.

There has developed an enormous demand for these plants especially for fruit. If you have not been getting some of this trade you are missing some good profits. They are easy to grow and handle. Put in a small stock and let us supply you; we will send to you or direct to your customers under your tags.

CABOT. A very early variety. Plants seldom exceed 3 feet in height and make a broad low bush. The color of the new growth in winter is a light red over olive. The large berries have a delicious subacid flavor.

CONCORD. The bush is of upright habit and at maturity exceeds 6 feet in height. The young growth is bright red in winter. The berries are large, frequently reaching three-quarters of an inch in diameter. They usually ripen a few days earlier than Rubel and are very fine in flavor.

JERSEY. The bush is of vigorous habit and grows very large. The winter color of the young growth is a light red over golden brown. The berries are among the very largest, light blue, and ripen about the same time as Rubel.

JUNE. A little earlier than Cabot. Berry is large, of medium blue color, sweet and delicious when fully ripe, with a slight subacidity. Newer and probably better than Cabot.

PIONEER. A very fine variety ripening about one week later than Cabot. The bushes are stocky, seldom exceeding 4 feet in height, with a tendency to be broad rather than high. Its stems are stout and stiff, and the winter color of the new growth is a delightful red. Pioneer produces heavy crops of berries close set in the cluster. They are larger than Rubel, of a medium blue color and fine flavor.

RANCOCAS. The bush of slender, vigorous, upright habit rarely surpasses 5 feet in height. The winter twigs are dark red. The berries are somewhat larger than those of Rubel and begin to ripen several days earlier.

RUBEL. A vigorous, productive variety. Well-developed bushes stand 6 feet high and the winter color of the young wood is a rich red. The large berries of fine color are usually ready to pick the first week in July.

LET \$100 EARN \$1000

We believe \$100 spent in our Lining-Out stock will increase in value from \$1,000 to \$1,500 in three years. The increase should be practically the same whether you invest a less or greater amount. By growing the stock yourself you have it on hand so you can let your customers see just what they are buying and you save the freight and packing charges. We will gladly help you make the best selections. Come see our stock if you have the time.

MISCELLANEOUS ITEMS

We did not intend to offer the following stock this season, as we wanted to increase our supply, but find we have some space with no copy for. This gives you the opportunity to get some items while they are scarce. We are limiting the supply to not more than ten of a variety to any one person. It is quite probable many of the items will be sold out early, so if you want any, better not delay ordering too long.

Stops and Prevents Rot

Wood, fabric, and rope don't just rot, they're eaten up by living fungi, termites and borers. Cuprinol puts a stop to it, by an unusual principle of wood and fabric preservation. Originated abroad, Cuprinol has long been used by leading florists and nurserymen of Denmark, England and other European countries. Cuprinol is surface applied—by paint brush, dipping, spray gun or swab. Cuprinol-treated material is non-poisonous to higher forms of animal and plant life. Exhaustive tests have proved that Cuprinol-treated wood and fabric is non-toxic to seedlings and plants in any stage of growth.

The manufacturers of Cuprinol say the wood will last three times as long as when untreated. Get a supply and see just what it will do. "When Cuprinol goes in rot stays out."

1 gal. cans at \$3.95 per gallon; 5 gal. pail at \$3.85 per gal.; 50 gal. drums at \$3.60 per gallon.

This shows one way to use this shading. We stretch wires over beds about 16 inches from ground.

Woven Lath Shading

Our woven lath shading is an efficient and economical material for the protection of newly set rooted cuttings, seed beds and small seedling transplants. It protects them from the hot rays of the sun and strong and destructive winds.

The construction of the beds is simple. You can use narrow boards (4 inch) nailed on small stakes (2 x 2 inches or 1 x 4 inches), or you can do as we do. We stretch two wires three feet part over a four foot bed (this will leave the lath shading extending over each wire six inches. This makes it easy to roll and unroll the shading without rolling off the wires. The wires are placed about 16 inches from the ground, thus giving the small plants plenty of room to grow before reaching the shading.

This Woven Lath Shading is easily handled, and when not in use you just roll it up and store away until ready to use it again.

The laths or pickets are approximately $\frac{3}{8}$ inch thick x $1\frac{1}{2}$ inch wide and 4 ft. long and are woven with five double strand $12\frac{1}{2}$ gauge galvanized wire, spaced about the width of a lath apart, thus giving the small plants about one-half shade.

This Woven Lath Shading is painted with a solution of red mineral oxide, greatly extending the life and use of the shading.

It is made in rolls of 50 and 100 feet. Can be easily handled by one or two persons.

It is also useful for making fences, to protect new plantings of grass and shrubbery around parks and fields and many other uses you may find for it. Can be easily rolled up again at any time and stored in a small space for future use.

A little investment in proper protection of tender and newly planted plants may save you many tedious hours of labor, considerable expense and may even save you an entire season's growth of your valuable plants.

Why take chances of sun ruining your plants? You can get over 3,000 plants under 100 feet roll when planted 4 in. apart each way.

Another big advantage of using this Woven Lath Shading is that you can water your plants even while the sun is shining hot on them. This means a lot in continued dry weather. Price: Up to 500 ft. at 18 cents per running foot, over 500 feet at 17 cents per running foot. Large quantities specially priced.

Root Cuttings better and quicker

with

THE PLANT HORMONE POWDER

ROOTONE

Just Dust and Plant

No Solutions No Waiting No Watching

We recommend ROOTONE because we have found it of much help to us in rooting cuttings, both in saving of time and in increased roots to the cutting. We use it on all the cuttings we plant. We know it pays us both in better roots and time saved in cutting beds.

ROOTONE is Best for Cuttings Because—

LOW COST. Can treat 30 to 50 cuttings for one cent.

SIMPLICITY. No skill is needed to apply ROOTONE. No measurements, no vials, no elaborate charts to follow, or clock-watching are needed. Just dip in dry powder and plant.

SPEED OF ROOTING. The time of rooting of cuttings is cut by ROOTONE treatment to anywhere from one-half to one-tenth of the time required without treatment.

SURENESS OF ROOTING. Cuttings that root with difficulty, such as holly, magnolia, arborvitae, lilac, and dogwood will respond in greatly increased percentages and in shorter time.

ROOTONE is a general stimulant for plants, supplying extra hormone at times when the plant is able to use more than nature provides.

ROOTONE treatment hastens and improves the rooting of cuttings; hastens germination from seeds and bulbs, resulting in earlier flowering.

2-oz. jar \$1.00; 1-lb. can \$5.00 postpaid

A two-ounce jar will treat up to 3000 cuttings; pound will treat up to 40,000 cuttings.

No solution or soaking treatment is necessary. Just dip the base of the cutting in dry powder and set in the propagating bed or cold frame.

TRANSPLANTONE

TRANSPLANTONE HELPS SAVE PLANTS

If you have been having trouble in transplanting some of the harder to get to live plants we suggest you try using "Transplantone" The Vitamin Hormone Stimulant For Plants. We understand it has given wonderful results even on Canadian Hemlock collected seedlings. We all know how difficult it is to get a fair percentage of them to live. A three oz. package will treat several thousand plants. All you do is dip the cuttings in water where the Transplantone is mixed. 3 oz. can \$1.00, 1 lb. can \$4.00, postpaid.

BLUEBERRIES

There has developed an enormous demand for these plants, both for fruit and ornamental purposes. If you have not been getting some of this trade you are missing some good profits. They are easy to grow and handle. Put in a small stock and let us supply you; will send to you or direct to your customers under your tag.

Business Information

Not open on Sundays. Open on Saturdays by appointment only. Open all day balance of week.

THESE PRICES are in effect for Spring 1950 season.

PRICES named in this Trade List apply only to orders placed by nurserymen, florists and dealers. Maryland customers are subject to 2% sales tax or send your License Number. All delivery costs are to be paid by purchaser.

PACKING. All goods are packed in boxes and bales for which we charge sufficient to cover cost of material used. We will add this cost to your invoice. This cost applies whether you remit with order or buy on time terms.

CLAIMS, if any, must be made immediately upon receipt of goods, and if just, made satisfactory, but in no case are we responsible for more than the purchase price of the stock in question. We will not be responsible for failure to fill orders in full or for any damage or delay to stock after delivery to the transportation company.

TERMS. We offer the usual terms: net 30 days from date of shipment to those of known responsibility but must have satisfactory business references from others or remittance must accompany order. Those desiring stock shipped C.O.D. will please remit one-fourth the amount of their purchase when ordering. Other terms by special arrangement.

NON-WARRANTY. We give no warranty, expressed or implied, the purchaser assuming all risk and responsibility of transportation, growth, planting, life of stock or any other matter on any stock we sell. We sent out good stock, carefully grown and packed but cannot control conditions after it leaves our care. We exercise the greatest care to keep our stock true to name and are willing to replace on proper proof any stock that may prove otherwise, or refund the amount paid us for such stock, but is mutually agreed that we shall not at any time be liable for any greater amount.

TELL US HOW TO SHIP, whether by express, motor truck or railroad freight. If by motor truck or railroad freight, tell us the route or over which line you want delivery made. If you do not give this information we will use our own judgment as to route and methods to use. It is mutually agreed that whether you name the route or leave it to our own selection, we will not in any way be responsible for time or condition of delivery and our responsibility ceases upon our delivery to the transportation company.

HARDINESS OF PLANTS. When hardiness of plants is mentioned herein it applies only to this section.

TIME OF SHIPMENT. We ship most every week in the year with the possible exception of during the winter when bad weather makes it impossible, although this is very seldom. Of course, there is a regular season for shipping the different plants, but if you want them out of season and are willing to take the risk of good delivery, we will pack with the utmost care and get them off to you at most any time you want them.

Plan to Visit Our Nursery

We will certainly be glad to have you come to see our stock for yourself. We believe you will find it compares favorably with that grown by other nurseries. Some of our customers have told it is better than is furnished by some others. We are on the Eastern Shore of Maryland, 100 miles south of Wilmington, Delaware., 100 miles from Cape Charles, Va., 90 miles from Annapolis, Md., via Matapeake ferry, 150 miles from Baltimore, Md., via Elkton, Md., 225 miles from New York, N. Y. We hope you can come to see our stock. It is good driving on the famous Eastern Shore.
